Allograft Cancellous Bone
Crushed and Chips

From the Makers of

The Naturally Osteoconductive Autograft Substitute

Allograft Cancellous Bone is an ideal alternative to autograft for quick, complete bone regeneration. Cancellous chips and granules form the osteoconductive scaffold for new bone formation while maintaining the porosity essential for tissue and vascular regrowth.

**Packable.** Cancellous Bone packs well into any size or shape defect, for maximum surgical flexibility.

**Ready-to-use.** Cancellous bone is available for immediate use with no refrigeration or thawing required.

**Alternative to Autograft.** Potential complications of iliac crest bone harvesting, such as morbidity, limited supply, and pain, make Cancellous bone an ideal autograft substitute.

**Obtained from an AATB-Accredited Tissue Bank.** This ensures highest quality bone through rigorous donor screening, testing and sterilization.

**Cancellous vs. Cortical Bone.** In many cases, cancellous bone is preferable to cortical bone due to its higher surface area and open porous structure that allows for easy cellular penetration and incorporation.

ISOTIS
Accelerating Innovation in Orthobiologics
**Bone Graft Extender or Composite Graft.** Cancellous Bone is a perfect compliment to IsoTis’ Accell® product line, and can be used as a bone graft extender or for composite grafting.

**Crushed or Chip Option.** Available in 4-10 mm chips or 1-4 mm crushed bone, Cancellous Bone enables the surgeon to tailor the graft to a wide variety of shapes and sizes of osseous defects.

**Bioresorbable.** Cancellous Bone is resorbed quickly and naturally through incorporation during the bone remodeling process.
